

STATEMENT SUMMARY

17.8.2026

MyClips Hair

We hereby confirm that the MyClips hair products manufactured by Mihape Oy / MYClips Finland and covered by this statement summary meet the allergy criteria required for the right to use the Allergy Label. The right to use the Allergy Label was granted in 2023.

The MyClips headband hairpiece offers a unique solution for people experiencing hair loss, providing hair that does not sensitise or irritate the skin. The materials and documentation used in the braiding of the headband hairpiece have been reviewed. The materials do not contain formaldehyde, mould inhibitors, soil-repellent agents, heavy metal dyes, carcinogens or nickel.

MyClips hair products include an undercap with attachment bases for the hair. The undercap and its materials have been reviewed. If the customer so wishes, the hair can be attached to existing hair with clips. The clips are not covered by the Allergy Label right of use, and alternative attachment methods are being explored. Attachment options are always discussed with the customer when placing an order. The surface of the undercap is smooth and does not sensitise or irritate the skin.

The hair is individually hand-braided according to each customer's wishes. The hair used is genuine, untreated Finnish hair. For both product models, the hair can also be made using the customer's own hair, if available. MYClips hair products are more breathable than fibre wigs and more versatile than human hair wigs, enabling everyday use without skin irritation.

The right to use the Allergy Label applies to the following products:

- MyClips headband hairpiece
- MyClips hair

This statement summary is valid for 2 years.
